

#9

Welcome parents, grandparents, aunts and uncles.

Watch this place weekly to find out inexpensive ideas that you can use to make sure **your** child becomes a successful adult. Let's face it- there isn't a parent in the world who doesn't wish the best for their child. So join us each week to learn something new. It will only take five minutes of your time to review this information, but it will lead to a lifetime of success for your child.

Things to consider

- The kitchen provides a place where you can work with your pre-kindergarten and kindergarten child on math skills such as counting, measuring and patterning as well as language and literacy skills.
- By expressing what they like and dislike in the way of foods allows them to build their expressive language skills.

What you can do

- Provide your child with a pitcher of water and have them fill various size bowls and cups.
- Talk with them about what is more and what is less.
- Provide various shape crackers, round, triangle, rectangle, square, count out three of each- have your child do the same.
- Allow your child to pick the shape of their sandwich- square, triangle.
- Also as you cut the sandwich in half or quarters be sure to call out to the child that this is one half, or one quarter- this helps them begin to understand fractions.
